ESICM marks "World Sepsis Day" by launching IMPRESS ~ International Multicentre PREvalence Study on Sepsis

IMPRESS is an International one-day point prevalence study for severe sepsis and / or septic shock organised by ESICM and SCCM to be conducted under the framework of the Surviving Sepsis Campaign. IMPRESS aims to determine the incidence and clinical patterns of septic syndromes on a single day in ICUs and Emergency Departments worldwide. Participating hospitals will collect data on November 7, 2013 using web-based and paper audit collection tools.

Hospitals from countries around the world are urged to take advantage of the opportunity to participate in this significant initiative and to assist investigators in measuring the global burden of sepsis.

More information about IMPRESS, including the protocol, and data collection tools can be found on the IMPRESS website: http://impress-ssc.com
